Monday

- **Body Analysis – please use your Coach Robb Body Analysis Spreadsheet to log this information for evaluation purposes**
- **Complete Rest Day**
Misc. Notes: make the most out of every hour of every day. For example, at the top of every hour (logistics pending), complete 25 push-ups and 25 crunches and refill an eight ounce of glass of filtered water. At the end of an 8-hour day, you will have completed 100 push-ups and crunches. You will also be on track to consuming your goal of water – half of your body weight in ounces of water. Little habits like this can yield huge performance benefits during training and ultimately racing.

Saturday

- **Body Analysis** – please use your Coach Robb Body Analysis Spreadsheet to log this information for evaluation purposes
- **(Morning Workout) Complete Racing Solutions MX Aerobic Workout #1**
[Please refer to the spreadsheet at the bottom of this document]
Workout Notes: This workout is going to push your internal pacing clock along with your ability to focus while you are working both fast and for a long period of time. You will be racing the clock for each set, so your choice of lines and ability to carry your momentum into and out of the corners will be very helpful for you to produce the lowest time per set. Keep a close eye on your rest interval - you don't want too much for this workout (this will push your aerobic engine). If you feel anything tightening up, simple stop, stretch and resume - failure to stretch could result in a torn muscle which will take you off of the bike for an extended period of time.
Post Workout Protocols
 - **Flexibility:** pay close attention to areas that you may not think about stretching – [hips, glutes, shoulder blades, etc.](#)
 - **Nutrition:** immediately consume 8-10 ounces of [Best Whey Protein](#) to replace depleted muscle sugar & repair muscle tissue
- **2 Hour Nap After Mid-Day Meal**
Misc. Notes: s you lie down to nap, make sure that you have the room as dark and cold as possible. Research has verified that these elements contribute to the quality of your nap which results in enhanced recovery and improvement.
- **(Evening Workout) Complete Racing Solutions Combo Weight Workout – Power Phase 1**
[Please use the spreadsheet and associated videos listed at the bottom of this document]
Workout Notes: these exercises are somewhat familiar but in a different order with a completely new outline of repetitions and number of sets (see the spreadsheet below for specifics associated with each exercise). You need to push through the fatigue and refrain from stopping and resting during the set. Stop the exercise when the form falls apart – jeopardizing your form is going to increase your risk of injury.
Pre-Hydration & Nutrition: 10-15 minutes prior to this workout, consume 8-10 ounces of cold [Energy Fuel](#) to top off both your calories and provide electrolytes for proper muscle contraction.
Sets: 3
Rep Count: 6-12 reps (varies by exercise)
Post Workout Protocols

Sunday

- **Body Analysis** – please use your Coach Robb Body Analysis Spreadsheet to log this information for evaluation purposes
- **(Morning Workout) Complete Racing Solutions MX Speed Workout #1**
[Please refer to the spreadsheet at the bottom of this document]
Workout Notes: during this workout you are going to be applying the overload principle to the track. The idea here is to take the smooth/optimum lines during set #1 when your blood sugar is normal and you are well hydrated - we expect fast times during this set. During set #2 when you are taking the non-optimal lines, you have to find a way to maintain lap times as fast as set #1 without blowing up - this will only happen if you are breathing deeply to maximize your oxygen uptake. During set #3 when you are back to smooth/optimum lines, we are looking for lap times faster than set #1 because your muscles have been "working hard" to handle the non-optimum lines. Stay mentally focused and watch that heart rate monitor to ensure your body hits the goal times without going out of our desired heart rate ranges (too high or too low).
Post Workout Protocols
 - **Flexibility:** pay close attention to areas that you may not think about stretching – [hips, glutes, shoulder blades, etc.](#)
 - **Nutrition:** immediately consume 8-10 ounces of [Best Whey Protein](#) to replace depleted muscle sugar & repair muscle tissue
- **2 Hour Nap After Mid-Day Meal**
Misc. Notes: if you would like to improve your VO2 Max numbers, take a nap! When calculating your VO2 max (the volume of oxygen you are able to take in) number, your percentage of body fat is factored into the calculation. As you know, when you nap, your body releases HGH naturally (human growth hormone) which is the hormone necessary to decrease your percentage of body fat. On the flip side of this equation, if you push your body too hard (mentally or physically), your body produces excessive amounts of free radicals along with elevated levels of cortisol (aka – fat magnet). So do yourself a favor and do all that you can to get this two-hour nap in – your health and performance will thank you later!
