**Cycle Duration:**  
**Work Week**  
**Focus:**

**Phase 8**  
**6 Weeks**  
**5/6**  
**Lower Intensity - Active Recovery – Absorb Last Four Weeks of Training**

**Intensity Note:**

- **Blue highlights indicate HR Zone 2 or less (Builds your aerobic engine – burns fat as a primary fuel source)**
- **Red highlights indicate HR Zone 3+ (Builds your strength, speed & LT – burns stored sugar as a primary fuel source)**

**Monday**

- **Body Analysis – please use your Coach Robb Body Analysis Spreadsheet to log this information for evaluation purposes**
- **Complete Rest Day**  
**Misc. Notes:** as your strength, speed & endurance get consistently better; the goal is to “measure” your progression. You don’t have to be too crazy with your documentation; however, you are always looking for indicators that you are improving – especially in the areas that your testing protocols indicate are your biggest limiters. With this in mind, pay close attention to your heart rate intensity zones for each form of training – your goal is to be “faster” at a lower heart rate. This is only accomplished with a big strength base and an aerobic engine (aka your blue workouts).
- **Evening Protocols**  
**Flexibility:** after your shower, upper body and lower body trigger point, foam rolling and stretching exercises – [CLICK HERE](#)

**(Morning Workout) Complete Racing Solutions MX: Aerobic Workout #1**

[Please refer to the spreadsheet at the bottom of this document]

**Workout Notes:** the emphasis for this workout is to lower your overall effort (based exclusively on your heart rate) and learn how to ride smooth, yet efficiently fast. It doesn't take a lot for you to "push the pace"; however, it will take patience and mental focus to find a comfortable speed with a lower overall heart rate. By following the indicated intensity levels, you will learn that you can actually become faster by lowering your effort down thanks to the momentum you will create. Remember, ride smart not hard!

**Post Workout Protocols**

- **Flexibility:** complete [dynamic movements](#), [static stretches](#) & foam rolling exercises for optimum recovery
- **Nutrition:** immediately consume 8-10 ounces of iced cold [Energy Fuel](#) and [Best Whey Protein](#) (1 scoop of each) mixed with almond milk.

- **2 Hour Nap After Mid-Day Meal**

**Misc. Notes:** plan ahead and time your nap within 30 minutes after a mid-day meal. To increase the quality of your nap, consume something that normally makes you feel sleepy. This will put you to sleep quicker and have you sleeping deeply – this will allow your body to produce the much needed hGH (the hormone that makes you lean!). Sleep deep, wake up leaner!

- **(Evening Workout) Complete Racing Solutions Bike: Even Tempo (60 Minutes)**

**Misc. Notes:** similar to your other even tempo rides this week, just slightly longer.

**Pre-Hydration & Nutrition:** 10-15 minutes prior to this workout, consume 8-10 ounces of [Energy Fuel](#) to top off both your calories and provide you the much-needed electrolytes

**Warm up-HR Zone 1:** Focus on [optimum pedal mechanics](#) right from the beginning

**Duration:** 10 minutes

**Gearing:** small chain ring up front, middle rear gearing

**Cadence:** 80-85 (no higher/lower)

**Misc.:** stretch and hydrate before moving into your main set

**Main Set: Even Tempo for 45 Minutes in HR Z2 (no higher)**

Settle into a comfortable load level and leg turnover that allows you to maintain a HR intensity of Z2

**Cool Down: HR Zone 1: Keep a close eye on your HR level for the final 5 minutes**

**Duration:** 5 minutes

**Cadence:** 85-90

**Post Workout Protocols**

**(Morning Workout) Complete Racing Solutions MX: Aerobic Workout #2**

[Please refer to the spreadsheet at the bottom of this document]

**Pre-Hydration & Nutrition:** 10-15 minutes prior to this workout, consume 8-10 ounces of [Energy Fuel](#) to top off both your calories and provide you the much-needed electrolytes

**Workout Notes:** To get the most out of this workout, make sure that you allow yourself some room to pick up the pace the second half of your main intervals. Wear a HR monitor to keep you from going too hard initially - pay close attention to the indicated intensity levels. Proper hydration will be imperative for you to optimize your time - mental clarity will be important for the last interval of starts.

**Post Workout Protocols**

- **Flexibility:** complete [dynamic movements](#), [static stretches](#) & foam rolling exercises for optimum recovery
- **Nutrition:** immediately consume 8-10 ounces of iced cold [Energy Fuel](#) and [Best Whey Protein](#) (1 scoop of each) mixed with almond milk.
- **2 Hour Nap After Mid-Day Meal**  
**Misc. Notes:** pay close attention to your protein intake; protein (specifically amino acids) is designed to rebuild the muscles that you have torn down during training. No matter how hard you go, you should not be tender any longer than 2 days, if you are struggling with soreness or overall fatigue levels, bump up your protein and brown bread intake. The B-Vitamins will improve the absorption of your protein for a quicker and more complete recovery.
